## Solutions for the Water Industry

### Water Treatment Chemical Manufacture

Industrial and manufacturing sites throughout the UK have a need for efficient management of their water from mains through to boiler water, cooling water and process water, to eventual discharge. Professional water treatment chemicals and service organisations are able to offer this essential service. However, they need the availability of a comprehensive supply of both speciality and commodity chemicals, as the basis of their product range, that will prevent scale

formation, corrosion and microbiological fouling, as well as many other water-associated problems. Univar is able to provide that comprehensive range of chemicals directly to the water treatment service companies or indirectly on their behalf. If you are looking for a specific chemical for use within this sector, our technical and product support facility in Manchester will be pleased to help.

#### Product Range Includes

- Algicides
- Antifoams
- Biocides
- Condensate Line Conditioners
- Corrosion Inhibitors
- Membrane Cleaner
- pH – Alkalinity Control
- Scale Inhibitors

### Water Utilities & Industrial Waste Water

We have developed a range of products to treat all areas of the supply and waste water market sector, in order to achieve compliance with consent limits and reduce chargeable elements in the final discharge stream.

A speciality range of products is also available for the control of odour and nuisance flies in sewage treatment environments.

#### Product Range Includes

- Antifoams
- Antiscalants
- Bio-Augmentation
- Biocides
- Flocculants
- Membrane Disinfection
- Nuisance Fly Control
- Odour Control
- pH - Alkalinity Control
- Plumbosolvency
- Redox Agents
