REACH Suppliers Bulletin No. 4 Substance Uses and Suppliers

UNIVAR

Dear Supplier,

Univar has and continues to put a lot of effort from a senior multi-functional Team into making REACH work for our customers and suppliers. One important requirement under REACH is to ensure that the 'USE' for which the product is to be used is covered with the substance registration. The definitions of 'USE' will shortly be finalised – this will help the supply chain to use a consistent definition.

To ensure that our customers' and our own 'USES' are covered in your substance registrations or the registrations of the substances in your products, we ask you to send us your proposed or finalised 'USE' descriptions for each product. We will then assess these to see if there are any missing 'USES' that should also be registered. Note: we will not add to your administration and workload by sending you a list of 'USES' unnecessarily.

Likewise for "Exposure Scenarios" (ES) where required by REACH, we ask that you send us your intended ESs when available, for us to review. If there are any ESs which do not fit with those you send us, we will discuss with you the best way of bringing these into REACH.

We look forward to receiving your information on substance or product 'USES' and "Exposure Scenarios".
