

Success Story

FIRST SALE OF AEPD VOX 1000, LOW ODOR NO VOC PRODUCT FROM ANGUS

We would like to congratulate Domenico Pilotto, our sales rep for Coatings in Veneto area, for the first sale of AEPD VOX 1000 to one of the most important Italian Deco Paint producers, that will use the product for the production of pigmented pastas for tinting systems.

AEPD VOX 1000 is a low odour no VOC multifunctional amine. It is a neutralizing amine with similar functionality to AMP but which is not a VOC according to the European Directive definition and which is particularly interesting for the development of solvent-free or low odor paint. It also gives good improvement in color strength in some water based pigment pastes with some dispersants. The product is relatively new but customer feedback is that it provided good stability to formula and good co-dispersing properties in pigment pastes. This product can also be used in Solvent based paints in order to add water in alkyd paints to reduce costs and VOC. Advantages is that AEPD VOX 1000 will not contribute in the VOC of the SB paint in comparison to AMP. For further information please see the presentation attached.

PRIMA VENDITA DI AEPD VOX 1000, NUOVO PRODOTTO SENZA ODORE NO VOC DELLA ANGUS

Congratulations to Domenico Pilotto for the first sale of AEPD VOX 1000 to one of the most important clients in Italy for the production of decorative paints. The client will use the product for the production of pigment pastes for the tintometric system.

AEPD VOX 1000 is a multifunctional amine without odor and no VOC. It is a neutralizing amine with similar functionality to AMP, but not VOC according to the European Directive definition, and is particularly interesting for the development of odorless solvent-free paints. The product also improves the coloring power in pigment pastes with water and is recommended for the production of dispersants without VOC. The product is relatively new but the feedback is that it improves the stability of the formula and improves the dispersion properties in pigment pastes. The product can also be used in solvent-based primers to reduce costs and VOC by adding water to alkyd primers. The advantage is that AEPD VOX 1000, unlike AMP, will contribute to reducing the VOC of the solvent-based primer. For further information see the attached presentations.
