

January 2009- Vanquish: Mineral oil foam control process aids

A new cost effective and easy-to-disperse bubble release foam control process aids for coating from Ionic Solutions.

Vanquish C986 and **Vanquish 1226** (silica containing) are blends of non-ionic surfactants and hydrophobes in highly refined mineral oil, designed for moderate and high PVC system.

Vanquish C1193 is a mineral oil free emulsion of high molecular weight polymer glycol derivatives, designed to have a negligible effect on gloss. Preferred antifoam for sensitive coatings where compatibility problems generate scissing or fish eye type surface defects from use of oil based antifoams

Univar can support you with a wide range of defoamers and excellent technical support. From conventional mineral oil to molecular defoamers based on Gemini surfactant technology, from silicon to non silicon based defoamers, Univar has the right product from your application
