

Vitamin A and D fortification with BASF Nutrition

Vitamin A and D are supplied in oil-based liquid formulations, and as different high-tech powders, i.e. **cold and hot-water soluble and also suitable for tablets.**

The Dry Vitamins are uniquely encapsulated, round and dense in structure. They resist stress as processing and moisture, with **up to 90% higher stability** than simple spray-dried products on the market.

Using Dry Vitamins from BASF is **highly cost effective** for manufacturers achieving performance during storage with less amount of vitamin.
